Press Release

Citrix Hypervisor secure with SEP sesam

- SEP supports current version of Citrix Hypervisor 8.2
- Comprehensive backup of Citrix environments thanks to wide range of functions
- With SEP sesam a total of 10 hypervisors can be backed up
- Data security through SEP immutable Storage (SiS) and Blocky4sesam

Holzkirchen, 27th of April 2023 – [SEP](#) offers efficient, scalable and easy-to-use tools for virtual environments with its [SEP sesam Backup and Recovery for Citrix Hypervisor](#) (formerly XenServer) solution. The solution goes beyond simple VM backups and creates a solution to optimise any virtual and physical environment. SEP sesam is a certified solution for Citrix Hypervisor and also supports the current version 8.2, which makes the manufacturer for platform-independent backup and disaster recovery solutions "Made in Germany" a universal tool for backing up the most diverse environments. SEP is thus committed to Citrix, while other backup manufacturers no longer support the latest version. With SEP, a total of 10 hypervisors can be backed up natively, which is a great advantage as most companies and organisations use more than one hypervisor. Thus, only one backup solution is needed to back up the entire IT environment.

The SEP management interface (WebUI) displays all existing Citrix VMs and thus simplifies the planning and execution of automated backup processes. Thus, no additional effort is required to backup and protect each Citrix hypervisor environment. Other features include agentless backups, crash consistency for Virtual Machines (VMs), support for native CBT (Changed Block Tracking), single file restore from mounted backups, hot and cold backups, platform-independent functionality and built-in encryption capabilities. With SEP sesam there are several possibilities to backup VMs on Citrix Hypervisor. Offline backup takes place when the VM is shut down. Full and incremental backup takes place via Changed Block Tracking (CBT). With COPY Backup, a complete copy of a VM can be made without interfering in all current generation chains.

To protect backup data from cyber threats such as ransomware, even in virtual environments, SEP offers the [SEP immutable Storage \(SiS\)](#) available for Linux and the new solution for Windows systems [Blocky4sesam](#). SEP also offers a variety of other protection mechanisms such as no-backdoors, technical security of GDPR and compliance requirements and that the data and log files remain in Germany/EU.

About SEP AG

SEP AG is a manufacturer of backup and disaster recovery software solutions for the protection of cross-platform, heterogeneous IT environments. The data backup solution "SEP sesam" secures a wide range of virtual environments, operating systems, applications and databases "Made in Germany". The headquarters of the company, founded in 1992, is in Holzkirchen near Munich. Support and sales in America are handled by the SEP Corporation. SEP has a strong partner network and relies on well-trained system houses for sales. Customers in more than 50 countries include Aldi Nord, SPIEGEL-Verlag, federal ministries, public utilities, universities and manufacturing companies. Weitere Informationen unter www.sepsoftware.com
